Janović, B. S.; Collins, A. R.; Vujčić, Z. M.; Vujčić, M. T. Acidic Horseradish Peroxidase Activity Abolishes Genotoxicity of Common Dyes. *Journal of Hazardous Materials* **2017**, *321*, 576–585. <https://doi.org/10.1016/j.jhazmat.2016.09.037>

**Fig. S1.** Detection of DNA damage (% tail DNA) using the Comet assay with the BEAS-2B cells. The y-axis shows the mean  $\pm$  SD of DNA damage measured through tail intensity parameter. The experiments were conducted in triplicate and repeated twice. NC- negative control (PBS), PC- positive control (50  $\mu$ M H<sub>2</sub>O<sub>2</sub>), HRP- acidic horseradish peroxidase (3 U ml<sup>-1</sup>), CAT- catalase (3 U ml<sup>-1</sup>).

**Fig. S2.** (A) HPLC profile of Orange II. (B) The mass spectrum of OR2 peak at 0.40 min. (C) TOF-MS of OR2 after enzymatic degradation by HRP-A.
