Contents

Table S1. Basic information about the propolis samples, geographical sites, wax content and classification of propolis according to the HPTLC fingerprint.

Table S2. The content of quantified phenolics in orange and blue propolis samples. The compound name, correlation coefficient, limit of detection (*LOD*), limit of quantification (*LOQ*), recovery of the analyses, intercept and slope and corresponding concentration ranges are listed.

Figure S1. Regional map of Serbia with marked locations where propolis was sampled.

Figure S2. Extracted ion chromatograms with mean expected retention times and accurate masses, structures and MS/MS spectra of flavonoid glycosides founded in propolis samples: (A) Rutin (quercetin-3-*O*-rutinoside); (B) Isorhamnetin-3-*O*-rutinoside; (C) Apigetrin (apigenin-7-*O*-glucoside); (D) Kaempferol-*p*-coumaroyl-rhamnoside.

Table S1. Basic information about the propolis samples, geographical sites, wax content and classification of propolis according to the HPTLC fingerprint.

No.	Location	Location	Mass of sample (g)	Wax content %	Classification according to HPTLC fingerprint
1	West region - Serbia	Zlatibor	1.01	61.39	Blue
2	East region - Serbia	Petrovac na Mlavi	1.17	39.32	Orange
3	Central region - Serbia	Kragujevac	1.05	31.43	Orange
4	West region - Serbia	Koceljeva	1.00	29.00	Blue
5	West region - Serbia	Koceljeva	1.01	27.72	Blue
6	South region - Serbia	Leskovac	1.01	33.66	Orange
7	East region - Serbia	Homolje	1.01	25.74	Orange
8	East region - Serbia	Kamenovo	1.01	24.75	Orange
