## Supplementary materials

**Table S1.** Lethal and teratogenic effects observed in zebrafish (*Danio rerio*) embryos at different hours post fertilization.

Category	Developmental endpoints
Lethal effect	Egg coagulation <sup>a</sup>
	Tail not detached
	No somite formation
	No heart-beat
Teratogenic effect	Malformation of head
	Malformation of eyes <sup>b</sup>
	Malformation of sacculi/otoliths <sup>c</sup>
	Malformation of chorda
	Malformation of tail <sup>d</sup>
	Scoliosis
	Yolk deformation
Growth retardation <sup>e</sup>	

<sup>a</sup> No clear organs structure are recognized

<sup>b</sup> Malformation of eyes was recorded for the retardation in eye development and abnormality in shape and size.

<sup>c</sup> Presence of no, one or more than two otoliths per sacculus, as well as reduction and enlargement of otoliths and/or sacculi (otic vesicles).

<sup>d</sup> Tail malformation was recorded when the tail was bent, twisted or shorter than to control embryos as assessed by optical comparison.

<sup>e</sup> Growth retardation was recorded by comparing with the control embryos in development or size (before hatching, at 24 hpf and 48 hpf) or in a body length (after hatching, at and onwards 72 hpf).
